

JavaScript Events & Event Handlers Reference

1. Mouse Events

Event	Description
<code>click</code>	Triggered when a user clicks an element.
<code>dblclick</code>	Triggered when a user double-clicks an element.
<code>mousedown</code>	Fires when a mouse button is pressed down.
<code>mouseup</code>	Fires when a mouse button is released.
<code>mousemove</code>	Fires continuously while the mouse moves.
<code>mouseenter</code>	Fires when the mouse enters an element.
<code>mouseleave</code>	Fires when the mouse leaves an element.
<code>mouseover</code>	Fires when the mouse moves over an element or its child.
<code>mouseout</code>	Fires when the mouse leaves an element or its child.
<code>contextmenu</code>	Fires when the right mouse button is clicked.
<code>wheel</code>	Fires when the mouse wheel is scrolled.

2. Keyboard Events

Event	Description
<code>keydown</code>	Fires when a keyboard key is pressed down.
<code>keyup</code>	Fires when a keyboard key is released.
<code>keypress</code>	Fires when a printable key is pressed (deprecated).

3. Form Events

Event	Description
<code>submit</code>	Fires when a form is submitted.
<code>reset</code>	Fires when a form is reset.
<code>change</code>	Fires when an input value changes after losing focus.
<code>input</code>	Fires immediately when the input value changes.

Event	Description
<code>focus</code>	Fires when an element gains focus.
<code>blur</code>	Fires when an element loses focus.
<code>invalid</code>	Fires when form validation fails.
<code>select</code>	Fires when text inside an input is selected.

4. Window & Document Events

Event	Description
<code>load</code>	Fires when the entire page and resources finish loading.
<code>DOMContentLoaded</code>	Fires when the HTML document is fully parsed.
<code>resize</code>	Fires when the browser window is resized.
<code>scroll</code>	Fires when the page or element is scrolled.
<code>unload</code>	Fires when the page is unloaded.
<code>beforeunload</code>	Fires before leaving or refreshing the page.
<code>error</code>	Fires when an error occurs while loading resources.
<code>offline</code>	Fires when internet connectivity is lost.
<code>online</code>	Fires when internet connectivity is restored.

5. Clipboard Events

Event	Description
<code>copy</code>	Fires when content is copied.
<code>cut</code>	Fires when content is cut.
<code>paste</code>	Fires when content is pasted.

6. Drag & Drop Events

Event	Description
<code>drag</code>	Fires continuously while dragging an element.

Event	Description
<code>dragstart</code>	Fires when dragging starts.
<code>dragend</code>	Fires when dragging ends.
<code>dragenter</code>	Fires when a dragged item enters a drop target.
<code>dragleave</code>	Fires when a dragged item leaves a drop target.
<code>dragover</code>	Fires continuously while dragging over a target.
<code>drop</code>	Fires when a dragged item is dropped.

7. Touch Events

Event	Description
<code>touchstart</code>	Fires when a finger touches the screen.
<code>touchmove</code>	Fires when a finger moves on the screen.
<code>touchend</code>	Fires when a finger is removed from the screen.
<code>touchcancel</code>	Fires when the touch interaction is interrupted.

8. Pointer Events

Event	Description
<code>pointerdown</code>	Fires when a pointer device is pressed.
<code>pointerup</code>	Fires when a pointer device is released.
<code>pointermove</code>	Fires when a pointer device moves.
<code>pointerenter</code>	Fires when the pointer enters an element.
<code>pointerleave</code>	Fires when the pointer leaves an element.
<code>pointercancel</code>	Fires when the pointer interaction is interrupted.

9. Media Events

Event	Description
<code>play</code>	Fires when media playback starts.

Event	Description
<code>pause</code>	Fires when media playback is paused.
<code>ended</code>	Fires when media playback completes.
<code>volumechange</code>	Fires when the volume changes.
<code>timeupdate</code>	Fires when the playback position changes.
<code>loadeddata</code>	Fires when media data is loaded.

10. Animation Events

Event	Description
<code>animationstart</code>	Fires when a CSS animation starts.
<code>animationend</code>	Fires when a CSS animation ends.
<code>animationiteration</code>	Fires when a CSS animation repeats.

11. Transition Events

Event	Description
<code>transitionstart</code>	Fires when a CSS transition starts.
<code>transitionend</code>	Fires when a CSS transition finishes.
<code>transitioncancel</code>	Fires when a CSS transition is cancelled.

12. Common Event Handler Methods

Method	Description
<code>addEventListener()</code>	Attaches an event listener to an element.
<code>removeEventListener()</code>	Removes an attached event listener.
<code>preventDefault()</code>	Prevents the browser's default behavior.
<code>stopPropagation()</code>	Stops the event from bubbling upward.
<code>stopImmediatePropagation()</code>	Stops bubbling and other listeners on the same element.

13. Common Inline Event Handlers

Handler	Description
<code>onclick</code>	Handles click events.
<code>ondblclick</code>	Handles double-click events.
<code>onchange</code>	Handles input value changes.
<code>oninput</code>	Handles live input changes.
<code>onsubmit</code>	Handles form submission.
<code>onkeydown</code>	Handles key press down events.
<code>onkeyup</code>	Handles key release events.
<code>onmouseover</code>	Handles mouse hover events.
<code>onmouseout</code>	Handles mouse leave events.
<code>onload</code>	Handles page or resource load events.
<code>onscroll</code>	Handles scrolling events.
<code>onfocus</code>	Handles focus events.
<code>onblur</code>	Handles blur events.

14. Important Event Concepts

Concept	Description
Event Bubbling	Event travels from child element to parent element.
Event Capturing	Event travels from parent element to child element.
Event Delegation	Parent handles events for dynamically added child elements.
Custom Events	Developer-created events for custom behaviors.
Event Object	Object containing details about the triggered event.

15. Most Important Events To Master First

Beginner Level

- `click`
- `input`
- `change`

- submit
- keydown
- keyup
- mouseover
- mouseout

Intermediate Level

- DOMContentLoaded
- scroll
- resize
- dragstart
- drop
- copy
- paste

Advanced Level

- Event Bubbling
- Event Capturing
- Event Delegation
- Custom Events
- Pointer Events
- Touch Events
